

Arizona State Permitting Dashboard Project Criteria

The Arizona State Permitting Dashboard provides a single location for owners of large, complex infrastructure projects to track the progress of each permit. It is a voluntary system, and only projects submitted through the State Permitting Dashboard site will be considered for publication on the dashboard.

To be eligible for the dashboard, a project must meet the following criteria.

1. Involve infrastructure construction for one the following sectors:
 - Aviation
 - Broadband
 - Electricity transmission
 - Land revitalization
 - Manufacturing
 - Mining
 - Pipelines
 - Renewable or conventional energy production
 - Surface transportation
 - Wastewater
 - Water resource
2. Be subject to applicable state environmental laws, permitting regulations and other relevant government authorizations, the size and complexity of which will make the eligible project benefit from enhanced oversight and coordination.
3. Require a total construction investment of more than \$25,000,000. If the total construction investment is less than \$25,000,000, an agency director may find that other factors make enhanced oversight and coordination beneficial to the eligible project.
